ABSTRACT

This report makes readily available the summary data from a universe survey made to establish a current population frame for sampling public and nonpublic schools. Ten charts and 41 tables document the statistics covering the number of schools, pupils, and teachers (in full-time equivalents); and provide data on program offerings by the organizational level of the school. The tables show separate figures for each State and the District of Columbia aggregated by four regions. (Author/MLF)

HIGHLIGHTS

Number and percent of public and nonpublic schools, pupils, and full-time-equivalent teachers: United States, 1968-69

Item	Total	Public		Nonpublic	
		Number	Percent	Number	Percent
Schools	112,096	93,544	83.4	18,552	16.6
Pupils	49,924,745	44,195,579	88.5	5,729,166	11.5
Teachers	2,162,146	1,936,918	89.6	225,228	10.4

FOREWORD

This statistical publication is based upon data collected in 1968-69 in order to establish a universe of public and nonpublic elementary and secondary schools. As soon as the data were accumulated and edited, the Office of Education issued a five-volume series of directories--four public school directories (OE-20126, volumes I, II, III, and IV) and one nationwide nonpublic school directory (OE-20127).

We are issuing this publication in order to answer consistently the needs of many agencies and organizations which request data on individual public and nonpublic schools. These requests vary from presidential task forces and congressional committees to business organizations and individuals making educational projections, advising on school facilities, and otherwise interested in improving American education. There is no other collective source of this information in such detail.

For their fine cooperation in supplying the basic information included in the tables presented herein, we are indebted to State and local public school officials and nonpublic school administrators in the 50 States, the District of Columbia, and outlying areas.

40. Pupil-teacher ratios in nonpublic secondary schools, by affiliation and region and State or other area: 1968-69 57

41. Average number of pupils per school in public and nonpublic elementary and secondary schools, by region and State or other area: 1968-69 58

INTRODUCTION

This report presents basic summary data on public and nonpublic elementary and secondary day schools for the 1968-69 school year. The data are based on a universe survey of these schools conducted by the U.S. Office of Education. For the first time,1/ elementary schools in the United States were included in the survey and in the resultant directories (previous educational surveys had covered separately the secondary public schools and the elementary and secondary nonpublic schools2/). The primary purpose of this survey was to establish a current population frame for sampling public and nonpublic schools. The data collected have proven to be in such demand for other uses by public and private research and planning agencies that an attempt is made here to publish summary statistics with some analysis. The issuance of this publication should make the information more readily available to the general public. Furthermore, it allows the National Center for Educational Statistics to respond uniformly to the numerous requests received for information on elementary and secondary schools. In addition to materials discussed in this text the basic tables contain data for individual States on a number of related aspects of elementary and secondary education.

The 1968-69 statistics presented in this survey cover the number of schools, pupils, and teachers (in full-time equivalents) and data on program offerings by the organizational level of the school. The basic tables show separate figures for each State and the District of Columbia aggregated by four regions: North Atlantic, Great Lakes and Plains, Southeast, and the West and Southwest. Data for seven outlying areas are listed after the States.

Questionnaires were sent to all schools offering regular school subjects at the elementary or secondary level in the fall of the 1968-69 school year. Public schools, including schools operated by State, local, and Federal agencies, in addition to those in local public school systems, were canvassed along with nonpublic schools. Data on preprimary grades are included in the statistics only when they are part of a regular elementary school and not operated as separate schools (nursery schools and kindergartens). No attempt was made to include such schools in this survey since separate preprimary schools, especially in the nonpublic sector, tend to be very small, difficult to locate, and often short-lived.

Statistics for the elementary and secondary levels were intended to reflect the administrative division between school levels in the particular school in question. Grades 7 and 8 may therefore appear either in elementary or in secondary organizations, depending on the practices of a particular State, school district, or school. Thus, grade 1-9 or 1-12 schools were reported as two schools in accord with the standard U.S. Office of Education definition of an elementary or secondary school.3/

The data collected in the survey were originally published in five directories,

---

1/ This was the first such survey for educational purposes. A survey covering public and nonpublic elementary and secondary schools was conducted for the Department of Defense in spring 1962, National Inventory of School Facilities and Personnel, OE-21026. The purpose was to assess physical facilities of school plants; enrollment data represented school plants rather than schools.

2/ U.S. Department of Health, Education, and Welfare, Office of Education, Directory of Public Secondary Schools, 1958-59, OE-20031; Statistics of Nonpublic Secondary Schools, 1960-61, OE-20050; Statistics of Nonpublic Elementary Schools, 1961-62, OE-20064; and Statistics of Nonpublic Elementary and Secondary Schools, 1965-66, OE-20111.

3/ See page 61.

four regional volumes for public schools and one nationwide volume for nonpublic schools. In addition to the name and address, up to seven additional items of information were listed for each reporting school.4/ It should be noted that subsequent to publication of the directories, several States submitted additional or clarifying information. As a result of these late reports and further refinement of the data, the totals shown on the tables in the introduction to the directories may not agree with the totals appearing in this report.

4/ Items listed in the directories include: Number of pupils by level, number of teachers by level, grade span of school, number of graduates, special programs offered, school district name for public schools, and county name and religious affiliation for nonpublic schools.

ANALYSIS OF DATA

HISTORICAL COMPARISON

State and U.S. Office of Education sources indicate that 113,659 public and nonpublic day schools were in operation during the 1968-69 school year (table 1); 18,600 (16.4 percent) of these schools were under nonpublic control.5/ Of the schools estimated to be in operation, 99 percent (112,096) responded to the survey--82,868 elementary schools and 29,228 secondary schools. An estimated 98 percent of all elementary and secondary pupils were enrolled in these schools.

Table A presents some historical information on the relationship between public and nonpublic schools in the 50 States and the District of Columbia for the school years 1961-62 through 1968-69 (1961-62 figures include 1960-61 data for all nonpublic secondary schools and some nonpublic elementary schools, not available for 1961-62). A steady reduction in the number of public schools is evident. Part of this decrease can be accounted for by the closing of many small schools, usually resulting from school district reorganization. The number of nonpublic schools also showed a decrease between the 1965-66 and 1968-69 school years. Much of the decrease in nonpublic schools may be attributed to the closing of Roman Catholic schools in many areas.

Enrollment in the public schools has continued to increase since 1961-62. Combined with the decrease in the number of schools, it is evident that the trend in public education is toward fewer but larger schools. In the nonpublic sector the Roman Catholic schools have shown a percentage decrease in enrollments since 1965-66 that is slightly larger than the decrease in the number of schools (table I). The result is fewer and smaller Roman Catholic schools. However, the nonaffiliated and the affiliated schools other than Roman Catholic, have grown larger since 1965-66.

During the 1968-69 school year, 11.5 percent of all elementary and secondary pupils were in nonpublic schools, compared with 13.0 percent in 1961-62. While nonpublic enrollment has decreased by only 7,000 pupils, an additional 6 million pupils have been absorbed by the public schools over this period.

Since 1961-62 the number of elementary and secondary teachers employed in both the public and nonpublic sectors has continued to increase at a rate greater than that of the total enrollment. This has resulted in an impressive reduction in the overall pupil-teacher ratio (26.8 in 1961-62 to 23.1 in 1968-69). The nonpublic pupil-teacher ratio has dropped from 31.5 pupils per teacher in 1961-62 to 25.4 pupils per teacher in 1968-69. The decrease in the pupil-teacher ratio for public schools, although less pronounced than for nonpublic schools, moved from 26.2 in 1961-62 to 22.8 in 1968-69.

SCHOOLS AND PUPILS BY REGION AND STATE

A regional analysis of the data (table B) shows that schools in the Great Lakes and Plains region, where 32.5 percent of the reporting schools were located, tend to be smaller than in other regions, reflecting only 28.6 percent of the total enrollment. The converse pertains to the North Atlantic region, which had only 22.6 percent of the schools but 26.0 percent of the total enrollment. The remaining two regions showed the percentage of schools nearly equivalent to the percentage of enrollment.

As shown in table C, 16.6 percent of the total reported schools in the United States were nonpublic. In the North Atlantic region, 25.8 percent of the schools were nonpublic. Together, the North Atlantic and the Great Lakes and Plains regions had 69.3 percent of all the nonpublic schools and 55.1 percent of all schools (derived from table B).

5/ Only table 1 includes all schools estimated to be in operation during the 1968-69 school year, regardless of whether they responded. All other tables show data for responding schools only.

Table A.--Historical comparison of public and nonpublic elementary and secondary school data: United States, 1961-62 to 1968-69

Characteristic	1/ 1961-62	1963-64	1965-66	1968-69

West and Southwest	26,281	23,027	87.6	3,254	12.4

The ratio of public schools to all schools varied greatly from State to State. Among elementary schools, public control ranged from over 95 percent of all schools in West Virginia and Oklahoma to under 70 percent of all schools in New York and Rhode Island. In both Oklahoma and Wyoming, 98 percent of the secondary schools were under public control. Of the secondary schools in both Rhode Island and the District of Columbia, only 64 percent were publicly controlled. The public/nonpublic division for the remaining States fell somewhere between these extremes (tables 2 and 3).

Over 50 percent of the 112,096 responding elementary and secondary schools were located in 12 States (table D). California reported the largest number of schools (8,428) and the highest enrollment; nearly 10 percent of the Nation's elementary and secondary pupils attended school in California. Second in enrollment and number of schools was New York, with 6,749 schools and 8.5 percent of the national enrollment.

Table D.--Twelve States with the largest numbers of elementary and secondary schools, in descending order by number of schools, 1968-69

State	Number of schools	Enrollment
California	8,428	4,867,377
New York	6,749	4,228,196
Pennsylvania	5,995	2,886,704
Texas	5,822	2,724,306
Illinois	5,395	2,658,944
Ohio	5,126	2,779,551
Michigan	4,337	2,170,265
Massachusetts	3,132	1,344,448
New Jersey	3,119	1,730,193
Indiana	2,775	1,328,955
North Carolina	2,529	1,219,452
Florida	2,415	1,468,681

SIZE OF SCHOOLS

During the 1968-69 school year, 82,868 of the reporting schools were classified as elementary; 17.4 percent of these schools were nonpublic. The total elementary enrollment (exclusive of preprimary enrollment) reported for the school year was 28,978,748 (14.5 percent nonpublic). Fourteen percent of the 29,228 schools reporting as secondary were nonpublic; they included 7 percent of all secondary enrollment (1,352,783).

Among the seven enrollment-size groups into which schools have been classified for analysis (tables E and 8 through 15), the predominant size groups for public elementary schools were 100 to 299 and 300 to 499; 52.4 percent of the schools and 39.1 percent of the pupils fell in these two ranges. However, 32.7 percent of the public elementary pupils attended schools with enrollments of 500 to 749 while schools in this size range represented only 21.1 percent of all public schools. Among nonpublic elementary schools, 41.5 percent fell into the 100 to 299 size group; this size group also had the highest enrollment of any single size group--26.8 percent of nonpublic elementary enrollment. Public secondary schools with enrollments of 1,000 or more represented only 23.9 percent of the schools but contained 55.0 percent of the public secondary enrollment. There were still many small public secondary schools, however, as shown by the concentration of nearly one-fourth of all public secondary schools in the 100-299 size range. The most prevalent school size among nonpublic secondary schools was 100 to 299 (35.2 percent of the schools), while 27.9 percent of the nonpublic secondary schools had less than 100 pupils. Enrollment in the nonpublic secondary schools was fairly evenly divided among the various size groups.

Table 41 presents the average number of pupils per school. Public schools, as a whole, tend to be larger than nonpublic schools; 465 pupils attended the average public school, while 309 pupils were enrolled in a typical nonpublic school. However, within the nonpublic sector the large Roman Catholic schools greatly affected the statistics; their average size was 392 pupils per school, compared with 137 and 152 pupils per school, respectively in the other religious-affiliated and nonreligious-affiliated schools.

GRADE SPAN

For this survey, school plants housing both elementary and secondary organizations

Table E.--Percentage distributions of elementary and secondary schools and pupils, by enrollment size of school: United States, 1968-69

Enrollment size	Public				Nonpublic			
	Elementary		Secondary		Elementary		Secondary	
	Schools	Pupils	Schools	Pupils	Schools	Pupils	Schools	Pupils
Total	100.0	100.0	100.0	100.0	100.0	100.0	100.0	100.0
Under 100	15.8	1.7	9.7	.9	20.3	3.4	27.9	4.0
100 to 299	27.4	13.9	23.4	6.5	41.5	26.8	35.2	19.7
300 to 499	25.0	25.2	15.7	9.0	20.6	25.5	15.5	18.2
500 to 749	21.1	32.7	15.5	13.8	11.1	22.2	10.2	18.8
750 to 999	7.3	15.8	11.8	14.8	3.8	10.7	5.3	14.0

1,500 or more	.4	2.0	10.4	31.4	.3	2.0	1.6	10.5

NOTE: Detail may not add to totals because of rounding.

were considered as two schools. The tables relating to grade span do not, therefore, reflect any grade 1-12 schools and will not be comparable with other published data reflecting combined elementary and secondary schools (tables 20 through 23). Grades 7 and 8 may sometimes have been reported as elementary and other times as secondary, depending on the organization of the particular school or, in the cases where States supplied the data, on the purpose of the reports from which the information was extracted. Grades above 8 were always considered as secondary, with the exception of those schools in Amish or Mennonite communities, which frequently keep the 9th and 10th grades in their elementary schools.

Public schools beginning with prekindergarten or kindergarten and terminating at grade 6 were the most prevalent type of organization at the elementary level (22,343 schools), followed in frequency by schools beginning at grade 1 and ending at grade 6 (14,227). Together these schools represented 53.5 percent of the total public elementary schools (table F). Schools beginning with the preprimary grades or grade 1 and ending at grade 8 accounted for 21.8 percent of the public elementary schools. Of the public schools ending at grade 6, 61.1 percent included the preprimary grades; of those ending at grade 8, only 33.0 percent included the preprimary grades.

The grade span most common among nonpublic elementary schools began with prekindergarten, kindergarten, or grade 1 and ended with grade 8; 73.2 percent of the nonpublic elementary schools fell into this category. Among these schools, 27.8 percent offered preprimary education.

The predominant grade span of the Nation's secondary schools was 9 to 12. This grade span is more characteristic of nonpublic than public high schools. Of the total public secondary schools (25,128), 32.4 percent, or 8,141 schools fell into this category, while 67.0 percent of the nonpublic secondary schools (2,749) had grade spans of 9 to 12.

The prevalence of the 1-8 and 9-12 grade patterns in the nonpublic school area reflects the traditional organization of Roman Catholic schools, as shown in earlier surveys.

STAFF

A total of 2,162,146 teachers (full-time equivalents) were reported involved in elementary and secondary education during the 1968-69 school year. Public schools reported nearly 90 percent of these teachers--1,066,536 at the elementary level and 870,382 at the secondary level. Of the total number of teachers 10.4 percent (225,228 FTE) were reported in the nonpublic

NOTE: Percent detail may not add to totals because of rounding.

schools, serving 11.5 percent of the pupils in schools representing 16.6 percent of the Nation's total (chart 1).

The national pupil-teacher ratio at the elementary level was 25.1 for public schools and 29.7 for nonpublic schools. Pupil-teacher ratios were particularly high in the larger nonpublic elementary schools, with an average of more than 40 pupils to 1 teacher in those schools with enrollments of 1,000 or more (tables G and 16 through 19). Public secondary schools had a pupil-teacher ratio of 20.0 for the 1968-69 school year; this was

somewhat higher than the 17.4 ratio in nonpublic secondary schools. The ratio of pupils to teachers was particularly low for smaller nonpublic secondary schools (with enrollments under 300); 34.5 percent of the nonpublic secondary school teachers (26,801 FTE) were employed in such schools for 23.7 percent of the nonpublic secondary school pupils (320,333).

The Southeast was the only region maintaining a lower pupil-teacher ratio for nonpublic elementary schools (24.9) than for public elementary schools (26.2). See table 38. At the secondary level, nonpublic schools maintained a lower pupil-teacher ratio than public schools, both nationwide, as previously noted, and in each of the four regions.

PREPRIMARY ENROLLMENT[6/]

Table 6 shows prekindergarten and kindergarten enrollment in those States for which data are available. Examination of the table reveals that the nonpublic elementary schools were educating a very small segment of preprimary pupils. In fact, the percentage of the total preprimary enrollment represented by nonpublic schools (8.2 percent) was considerably lower than the percentage of total elementary enrollment in nonpublic schools (14.5 percent). However, this extremely low nonpublic percentage may result from the exclusion from this survey of separately organized preprimary schools, which are usually a nonpublic school phenomenon. The annual study, "Preprimary Enrollment of Children Under Six"[7/], reveals that slightly more than a million of the 3.9

6/ Includes only those preprimary programs that are part of a regular elementary school.

7/ Source: U.S. Office of Education, Preprimary Enrollment of Children Under Six: October 1968 (OE-20079-68), by Roy C. Nehrt and Gordon E. Hurd. Washington, D.C., U.S. Government Printing Office, 1968.

million 3- to 5-year-old children receiving preprimary education were doing so under nonpublic auspices. That survey encompasses all children attending prekindergarten and kindergarten programs, regardless of whether or not the program is part of a regular elementary school.

Nonpublic school preprimary enrollment (as included in this survey) represented a greater percentage of the total preprimary enrollment in the Southeastern States than in the other regions. This is related to the absence, until recent years, of State funds available for public preprimary education in most States of the Southeast. This pattern is further reflected in table 20, which shows the number of public schools beginning with prekindergarten and kindergarten and ending with grades 6 and 8 to have been proportionately lower in the Southeast region than in the other regions.

SPECIAL PROGRAMS

The percentage of schools offering specified special programs is shown in table H. The 1968-69 questionnaire requested that respondents check each of the following programs that they were offering: (1) Regular day school program, (2) special program for the handicapped, (3) vocational education program, (4) special program for the educationally disadvantaged, and (5) adult education program.

The vocational and adult education reporting was uneven for public schools (table 24). Due to the unavailability of information on vocational education pro-

Table H.--Percent of elementary and secondary schools offering specified programs, by region: United States, 1968-69

1/ Data not consistently available from State education agency records.
2/ Data not consistently available from State education agency records or from individual schools.

grams in many State education agencies, data for public schools is incomplete in States that did not refer questionnaires to the individual schools. The number of public schools reporting adult education programs also should not be interpreted as being a complete report of the number of such programs actually being offered. Adult education programs are generally operated by the public school districts rather than by individual schools and as such would not be fully reported in this school-level survey.

Programs for the mentally or physically handicapped were offered by 21.0 percent of the public schools and 13.2 percent of the nonpublic schools. Such programs are particularly prevalent in the North Atlantic region, where 32.5 percent of the nonpublic schools and 26.3 percent of the public schools reported that they were being made available.

About one-fifth (20.7 percent) of the public schools offered special programs for the educationally disadvantaged; however, only 5.4 percent of the nonpublic schools offered such programs. Programs for assisting disadvantaged pupils were most commonly found in the West and Southwest region, where they were reported by 29.6 percent of the public schools and 11.1 percent of the nonpublic schools.

Among nonpublic schools, 1.7 percent were reported as offering vocational education and 2.5 percent as offering adult education. In the Great Lakes and Plains region, 5.3 percent of the nonpublic schools offered adult education programs as compared with fewer than 2.0 percent in each of the other three regions.

NONPUBLIC SCHOOLS--RELIGIOUS-AFFILIATED AND NONAFFILIATED

Table I presents some basic historical data on nonpublic schools. These are presented for nonaffiliated and affiliated schools, with data for Roman Catholic schools shown separately from the other religious-affiliated schools. The total number of nonpublic schools reported to be in operation decreased between 1965-66 and 1968-69. However, when the figures are examined by affiliation status, it is evident that the number of nonaffiliated elementary schools increased while the number of all other nonpublic schools decreased. The total enrollment in nonpublic schools declined between 1965-66 and 1968-69. This drop in total enrollment was solely due to the decrease in Roman Catholic school enrollment, since enrollments in nonaffiliated schools and religious-affiliated schools other than Roman Catholic continued to increase through 1968-69.

The number of teachers in nonaffiliated secondary schools has declined slightly since 1965-66. Since the decrease was accompanied by an increase in enrollment, pupil-teacher ratios for these schools has increased. The number of teachers in the remaining types of nonpublic schools (as specified in table I) has increased. In the religious-affiliated secondary schools outside of the Roman Catholic sector, however, the increase did not keep pace with increasing enrollments, as illustrated by a higher number of pupils per teacher in the 1968-69 school year than in the 1965-66 school year (13.8 and 12.4, respectively).

Nearly 85 percent of the enrollment in the nonpublic sector was in Roman Catholic schools (tables 31 through 34). It is therefore obvious that statistics on Roman Catholic schools strongly influence any data shown for all nonpublic schools. Roman Catholic enrollment represented over 50 percent of the total nonpublic school enrollment in all but two of the 50 States and the District of Columbia, the exceptions being South Carolina and Virginia. Roman Catholic schools comprised 76.4 percent of all the nonpublic elementary and secondary schools in the United States (chart 2).

The next largest group of religious-affiliated schools were Lutheran (1,394 schools or 8.6 percent), the denomination which also had the second largest number of pupils enrolled (195,690). The Seventh-day Adventists followed with 4.9 percent of the nonpublic schools; however, they had only 51,588 pupils. Jewish schools and Protestant Episcopal schools each had greater enrollments, with 66,724 and 54,122, respectively.

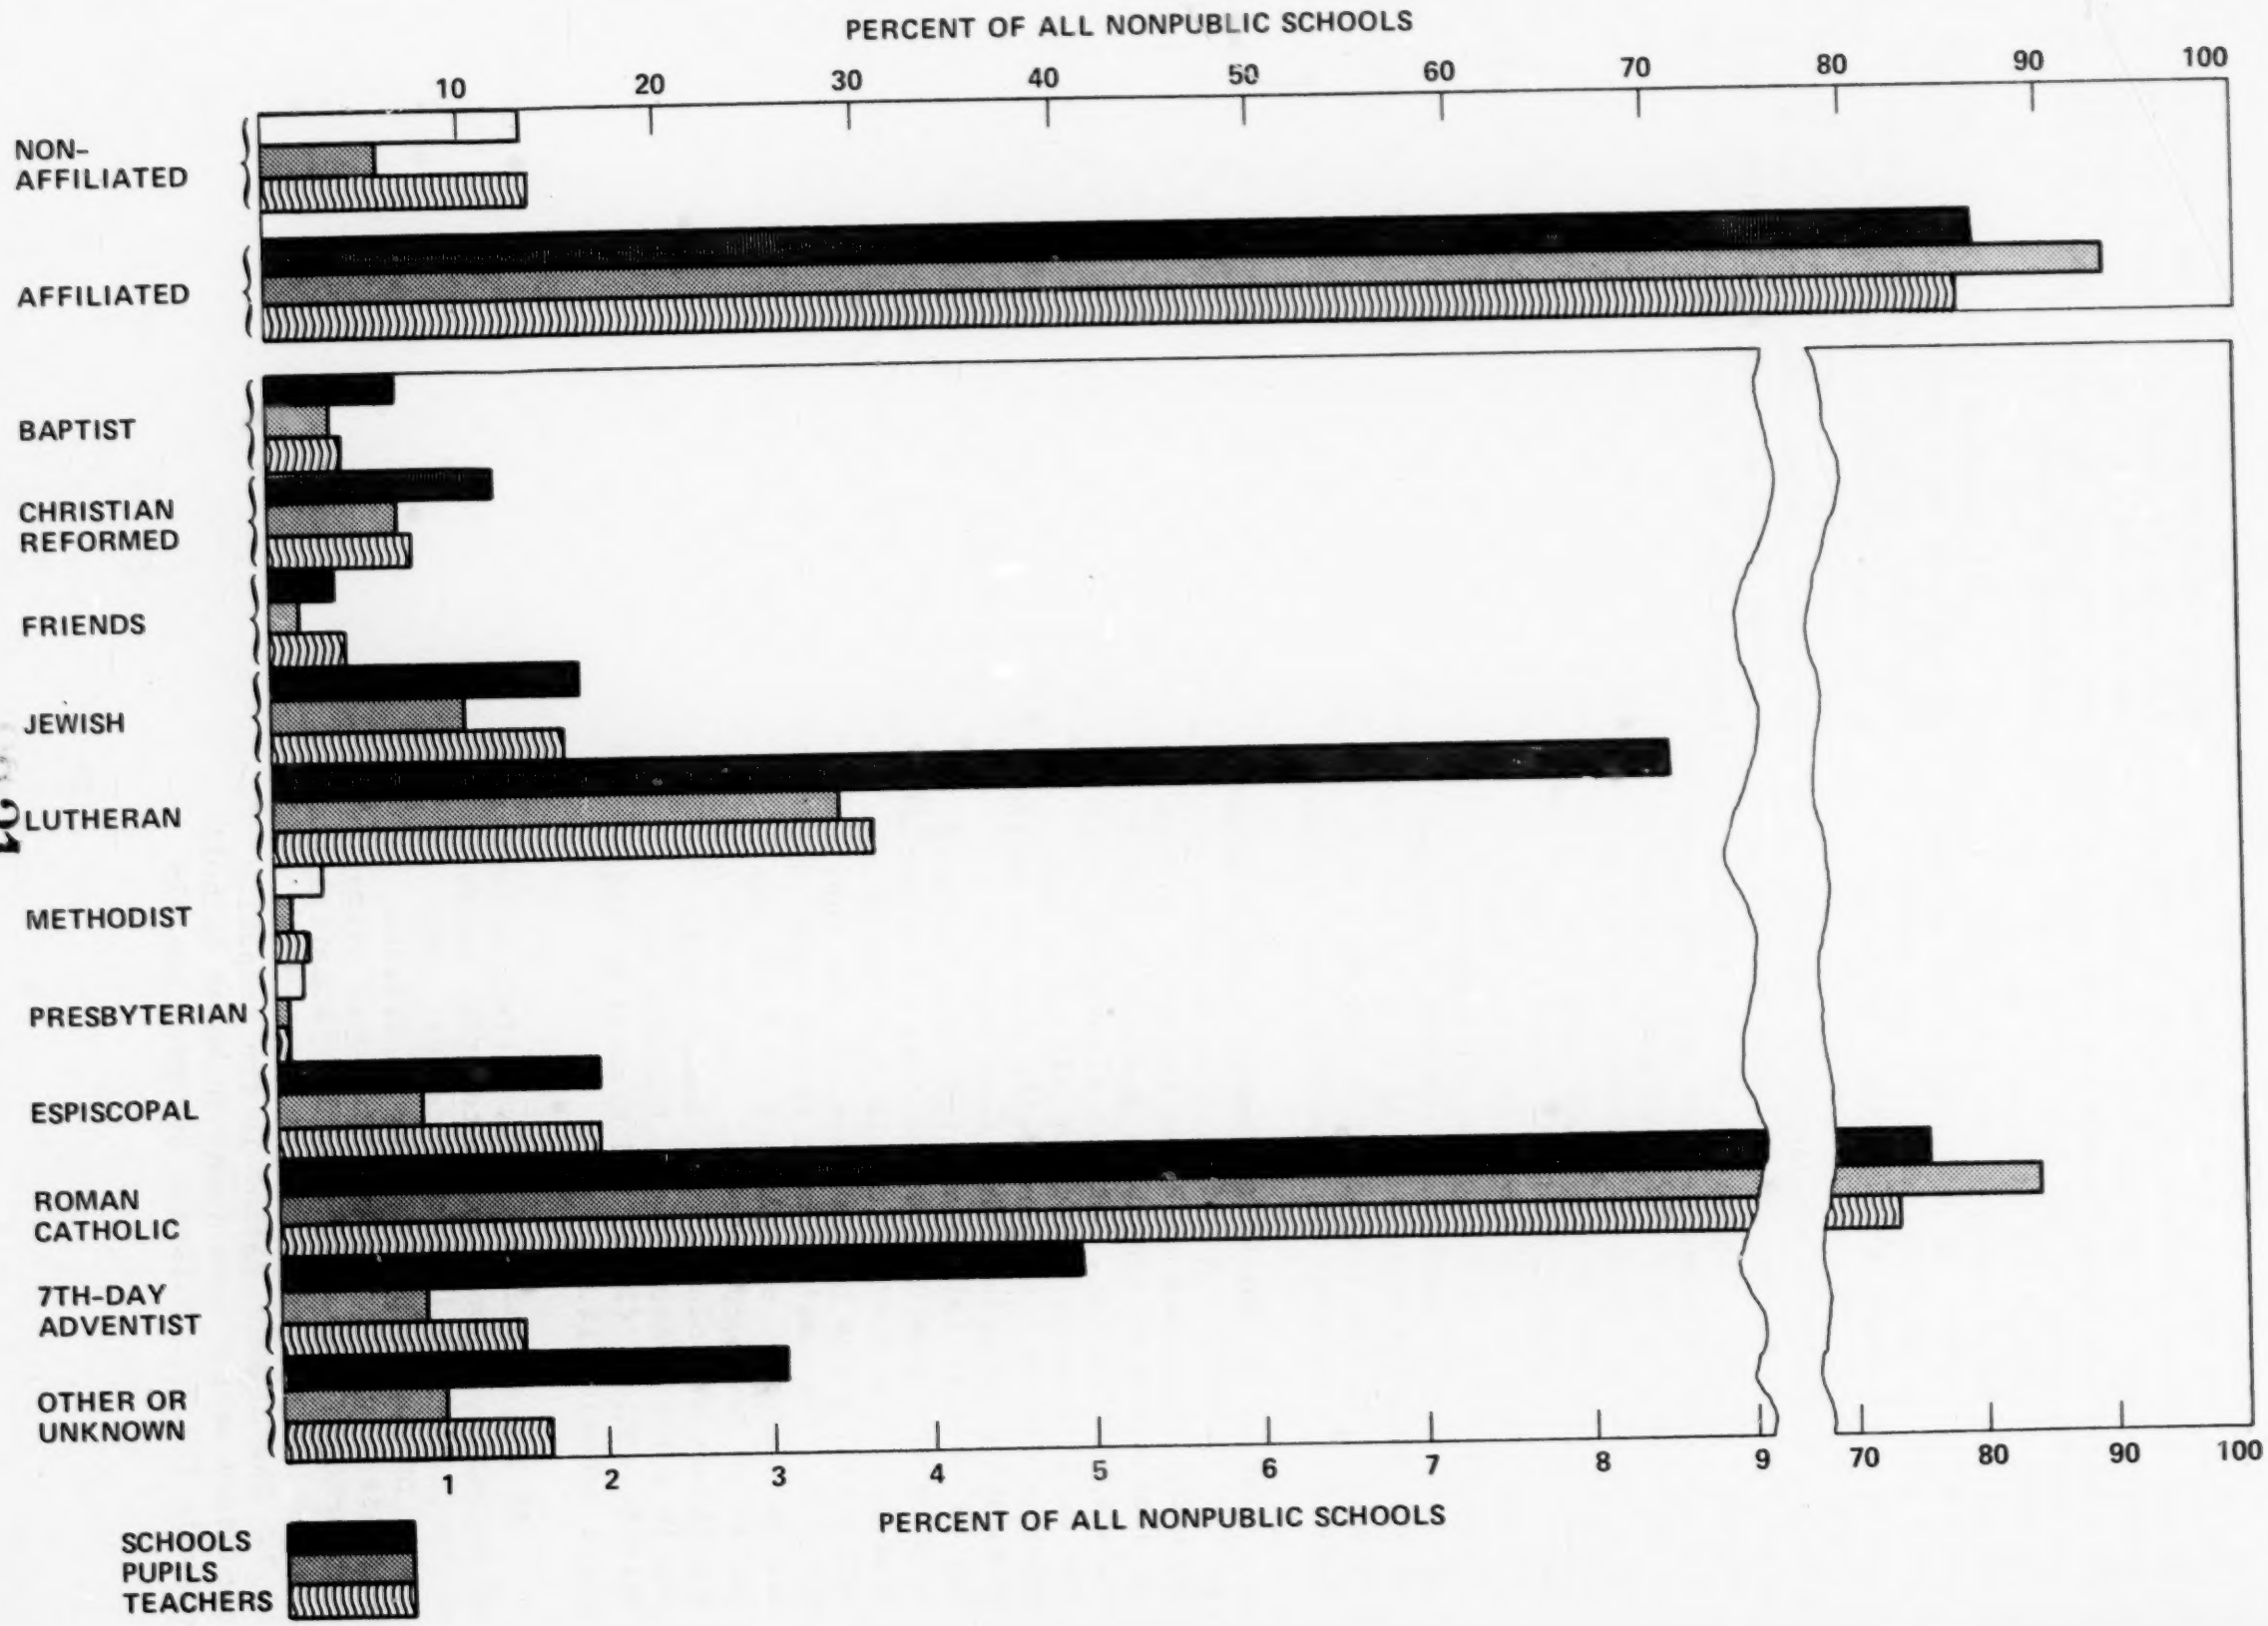
Chart 2.—Percent of nonpublic schools, pupils, and teachers, by affiliation, 1968-69



The schools of various religious affiliations tend to be localized in one or two regions and hardly appear in others (tables J and 27 through 29). Over 80 percent of the Friends schools and most of the Jewish schools (83.3 percent) were located in the North Atlantic region. In fact, 188 (62.3 percent) of the total number of Jewish schools were found in New York and 21 (35.6 percent) of the total number of Friends schools were found in Pennsylvania. Nearly 70 percent of the Christian Reformed and Lutheran schools were located in the Great Lakes and Plains region. Almost 90 percent of the Baptist schools were divided between the Southeast region and the West and Southwest region. These same two regions together contained only 25 percent of the Roman Catholic schools. The nonaffiliated schools were concentrated in the North Atlantic region (41.8 percent) with another 28.8 percent located in the Southeast. Only 9.4 percent of the nonaffiliated schools were in the Great Lakes and Plains region, with the West and Southwest claiming the remaining 20.0 percent.

Tables 39 and 40 represent pupil-teacher ratios by religious affiliation of schools. Here the influence of Roman Catholic schools on statistics of nonpublic schools is particularly pronounced. At the elementary level, the pupil-teacher ratio for all nonpublic schools was 29.7 compared with 25.1 in public elementary schools. When each type of religious affiliation and the nonaffiliated schools are examined separately, it is noted that only the Roman Catholic pupil-teacher ratio (33.5) was higher than for the public schools. The next highest ratios were 24.1 for the Lutheran schools and 23.1 for the Christian Reformed schools. The nonaffiliated elementary schools had the lowest number of pupils per teacher (13.3), followed by Friends schools (14.0) and Protestant Episcopal schools (14.3).

At the secondary level, certain groups of nonpublic schools are noteworthy because of their low pupil-teacher ratios. The number of pupils per teacher in Friends, Methodist, and Protestant Episcopal secondary schools was lower than 10. Nonaffiliated schools had an average pupil-teacher ratio of 10.7. The highest ratios in the nonpublic secondary sector were found in Roman Catholic schools (19.9), Christian Reformed schools (19.5), and Lutheran schools (18.1). The pupil-teacher ratio for all nonpublic secondary schools combined (17.4) and the ratio for each separate group of nonpublic secondary schools was lower than that for public secondary schools (20.0).

Pupil-teacher ratios alone cannot be interpreted as a measure of the quality of education being offered in the schools since a low pupil-teacher ratio may reflect numerous small schools of varying quality in scattered locations, rather than larger schools utilizing many teachers and specialists, each responsible for small numbers of pupils.

Reliability and Comparability of the Data
Definitions
Copy of the Questionnaire

RELIABILITY AND COMPARABILITY OF THE DATA

Data for this survey were obtained through the cooperation of State and local education agencies and individual schools on OE Form 2304, 9/68, a copy of which is included at the end of this appendix. Data were requested as of October 1, 1968, or the nearest date on which membership in the schools could be considered stabilized. The original source of the data varied; in some States, the school district offices completed the forms; in others, individual schools supplied the information. Many States reported directly from the files at the State education agency. Those States which had the needed data stored on computer tape were provided with a standard punched card format so that they could provide information compatible with that which OE was accumulating centrally.

Although the survey was conducted on a voluntary basis, it is estimated that the resulting data represent 99 percent of all public schools operating in the 50 States and the District of Columbia in the fall of 1968-69 and 97 percent of the nonpublic schools known to exist. Item nonresponse for those items discussed in this publication was virtually eliminated through careful editing and error correction procedures. Preprimary enrollment, preprimary teacher data, and special program offerings were not available for some States supplying data directly from their files. Footnotes to the tables reflect the availability of such specific data.

Comparability of figures in this report with other OE publications is contingent on the completeness of response in individual States, interpretation of definitions, and the specific purposes of the other reports. For example, the data in this report are not entirely comparable with those published in the Office of Education's Fall 1968 Survey of Public Schools (OE-20007-68) because of differences in coverage and type of respondent. Whereas the annual fall survey covers only those schools operated by local educational agencies, an attempt was made in the School Universe Survey (source of data for this publication) to obtain statistics on all types of public schools, whether operated by agencies of local, county, State, or Federal governments. The respondents in the Fall 1968 Survey were the State educational agencies, which had 15 years of experience in reporting, while the respondent in this first school universe effort was sometimes an administrative unit other than the State educational agency (local educational agency, school principal, etc.). The comparability of data for those schools covered in both surveys was affected to the extent that there were lack of familiarity with standard terminology and varying interpretations of reporting requirements at the various levels. Variations may also result from revisions or refinements of data by respondents between the times the two reports were submitted.

The data in this report (particularly those for numbers of schools) will agree with the data in individual State agency reports to the extent that the standard Handbook1/ definitions specified on the survey instrument were in use in the various State agencies.

The response category particularly affected by reporting differences was that of full-time-equivalent teachers. Where the number of teachers seems large, they may represent a count of persons employed, both full-time and part-time, rather than full-time equivalents as requested. Many of the States supplied the data for this survey from the files at the State education agency where they did not have the number of 12th grade graduates by individual school. Consequently, the item was unreported or underreported in so many instances that it was decided not to include statistics on high school graduates in this publication. The information is available, by State, in Statistics of Public Schools: Fall 1968, (OE 20007-68).

Figures for some States in the West and Southwest region (particularly Alaska, Arizona, and New Mexico) are high due to the inclusion of schools operated by the Bureau of Indian Affairs. Reporting for the North Atlantic region is complicated by the existence of quasi-public academies which have both publicly and privately supported pupils.

1/ Handbook I, The Common Core of State Educational Information. Bull. 1953, No. 8.

These schools are sometimes reported as private, other times as public, or the pupils may be reported by State education agencies as public while the institutions remain on the rolls of nonpublic schools. For notes on a specific region, please consult the Directory for that region (see inside back cover of this publication).

DEFINITIONS

A SCHOOL is a division of the school system consisting of a group of pupils composed of one or more grade groups, organized as one unit with one or more teachers to give instruction of a defined type, and housed in a school plant of one or more buildings. More than one school may be housed in one school plant or building, as is the case when elementary and secondary programs are housed in the same school plant.2/

PUBLIC SCHOOLS are defined in this survey as schools that receive their principal support from local, State, or Federal funds. They include regular day schools operated by local school systems, State and federally operated schools such as special-purpose institutional schools for the physically or mentally handicapped or for wards of the State or Federal Government, schools operated by the Department of Defense on military bases,3/ and Indian schools under the jurisdiction of the Bureau of Indian Affairs.

For this survey, NONPUBLIC SCHOOLS were defined as schools supported by means other than public taxation or public grants. The term includes parochial and other religious-affiliated schools; privately operated nonsectarian schools, privately operated schools for the deaf, blind, mentally retarded, or students with other types of physical or mental exceptionality, for whom education equivalent to that of the public elementary or secondary schools is provided; private college preparatory schools or military academies; "finishing" schools; and laboratory schools of private colleges and universities.

The classification of schools as ELEMENTARY or SECONDARY is based on definitions in Handbook I, The Common Core of State Educational Information. Respondents were instructed to use this definition and to report pupils and teachers according to the same organizational levels. Grades beyond grade 8 are generally considered secondary.

The number of TEACHERS is shown in FULL-TIME EQUIVALENTS. This means that the number of full-time teaching positions is shown, rather than the number of individuals filling the teaching positions. For example, a principal who teaches half days would be counted as 0.5 of a full-time-equivalent teacher. Two preprimary teachers, each working half days would be counted as 1.0 full-time-equivalent teacher. A music teacher working only two half days a week would be counted as 0.2 of a full-time-equivalent teacher.

2/ Ibid.

3/ Department of Defense schools within the United States are counted along with public schools; DOD overseas schools are included at the end of each State table.

INSTRUCTIONS AND DEFINITION OF TERMS

GENERAL. This survey is intended to develop data on schools "A SCHOOL is a division of the school system consisting of a group of pupils composed of 1 or more grade groups, organized as one unit with 1 or more teachers to give instruction of a defined type, and housed in a school plant of 1 or more buildings. More than one school may be housed in one school plant or building, as is the case when the elementary and secondary programs are housed in the same school plant."1/ "A TEACHER is a staff member performing assigned professional activities in guiding and directing the learning experiences of pupils in an instructional situation."2/ If a teacher is assigned only part-time to this school, with the remainder of his time available to other schools or to other activities, the time assigned to teaching in this school should be prorated on the basis of a regular teaching work week and added in to the calculation of full-time equivalents. F.T.E. is expressed in decimals, to the nearest tenth.

ITEM 1A. Leave this space blank.

ITEM 1B. Enter school identification code used in your State, if any.

ITEM 2. If the school is located in a city which is not part of any county, enter here the name of the city.

ITEM 3. Use OFFICIAL name of district. The number requested here is NOT A CODE NUMBER assigned for data-processing identification, but is the numerical designation used in some States to properly identify the school district, such as River City No. 12, or Ashland R-4.

ITEM 5. Report here only work below college level

ITEM 6. A SPECIAL PROGRAM FOR THE HANDICAPPED refers to either physically or mentally handicapped pupils.
A SPECIAL PROGRAM FOR THE EDUCATIONALLY DISADVANTAGED is a program which has as its purposes *(1)* raising the educational achievement of certain educationally deprived children to levels appropriate for their ages, and *(2)* otherwise compensating for educational disabilities suffered through experience and environment. Funds come entirely or in part from State or Federal sources.
A VOCATIONAL EDUCATION PROGRAM is an instructional program designed to prepare enrollees for employment and administered in accordance with the "approved" State Plan for Vocational Education.
An ADULT EDUCATION PROGRAM is an organized program to provide opportunity for adults and out-of-school youth to further their skills, knowledge, habits, or attitudes.

ITEMS 7, 8, and 9. Pupils and teachers should be reported on the same organizational basis. The data should be as of a date when the school has achieved enrollment stability for the Fall term, usually on or about October 1. If a school plant has both elementary and secondary grades, it should be considered as 2 schools, and separate report forms should be filled in for each level.

ITEM 10. The number of graduates should include those for the regular school year plus any 1967 summer school graduates.

ITEM 11. Respondent data may be omitted in States where the information is being supplied by the State education agency.
